

## DYNACODE II

Perfection in packaging printing.

# DYNACODE II

efficient . flexible . fast

- > Intermittent and continuous mode freely selectable
- > Left and right version available
- > Up to 900 m transfer ribbon for long production running times
- > Display of remaining transfer ribbon for quick ribbon changes
- > Optimal transfer ribbon usage
- > All common interfaces for fast data exchange
- > Minimum of wear parts
- > Intuitive graphical user interface with icon buttons
- > WYSIWYG display with preview for verifying the layout
- > 7" touch-screen colour display

## Dynacode II – the further advancement of a successful series.

With our established Dynacode series, we set new standards for the printing of foil packaging. The keyword here is flexibility: mode, speed, print resolution, installation position - there are no limits regarding the wishes and needs of our customers. Therefore our new product line Dynacode II is nothing other than the logical continuation of a success story. Below we will show you all operating modes and product components of the system.

### > Continuous mode

---

When printing continuously the printhead stands still while the packaging foil is guided through. Printing takes place during the operation of packaging machine.

### > Intermittent mode

---

When printing intermittently the printhead moves over the foil in order to move back to initial position. Printing takes place while the machine is at a short standstill, frequently while packaging is being filled.

### Control unit

---

The control unit of the Dynacode II features an intuitive user interface with icon buttons and a 7" colour touch-screen display with preview for verifying the layout. This makes it very easy to keep control over the print configuration.

### Bracket system

---

Our bracket systems permit an uncomplicated integration in your packaging line. The newly positioned return pulleys and the registration unit which can be mounted on all sides, offer a broad scope of variation of the foil run.

### Left and right version

---

Again for Dynacode II we offer the bracket systems as a left-mounted and right-mounted variant. Horizontal and vertical mounting is virtually unlimited: maximum flexibility.

### IP version

---

The splash-proof version offers additional protection in harsh production environments. During the cleaning process neither print module nor control unit must be dismounted or covered. The cleaning cassette necessary for this can simply replace the ribbon cassette within seconds. This means that production downtimes are even further reduced.
