

GoDEX AG2000-ZX Print-and-Applify System

low-cost print-and-apply system

AG2000-ZX systems combine powerful GoDEX ZX-1000i series thermal transfer printers with a roll-on applicator to print labels and apply to the top or side of a wide range of products.

A choice of 200, 300 and 600dpi resolution models is available.

Systems can be supplied for use with existing conveyors or with integrated conveyors to suit the products being labelled.

GoDEX

top or side apply

AG2000-ZX systems can be installed to label onto the top or right-hand side of products moving on a conveyor at up to 24m/min.

The soft sponge roller allows delicate and uneven products such as meat, bakery products and vegetables to be labelled without damage.

Simple adjustments allow the label size to be changed without the need for tools.

features and options

Powerful GoLabel software, GoAPP Android app, Windows and MacOS drivers are included with all AG2000-ZX systems.

Ethernet, USB and serial interfaces are included as standard with optional WiFi and Bluetooth.

Stand-alone operation is possible allowing the system to be operated without a PC or host system connected. The printer touchscreen can be used to select label designs and enter variable data.

Inline barcode readers and vision systems allow all products to be quality checked and automatically rejected.

Specification

AG2000-ZX

Printer:	GoDEX ZX1200i, ZX1300i or ZX1600i
Print method:	Thermal transfer or direct thermal
Print resolution:	200, 300 or 600dpi
Label size:	Width 25 to 110mm / length 30 to 150mm
Application speed:	Up to 24m/min (400mm/sec) - independent of print speed to ensure optimum print quality
Label and ribbon roll sizes:	Label rolls up to 200mm diameter / ribbons up to 450m length
Dimensions LxWxH:	965 x 270 x 400mm including printer
Weight:	7Kg excluding printer / 20.6Kg including printer
Standard interfaces:	Ethernet, USB and serial
Optional interfaces:	WiFi, Bluetooth and parallel
